Investigating ways to prevent or delay cognitive decline

Working with data from clinical trials, observational cohort studies, evidence synthesis and online surveys to develop a holistic understanding of the different risk factors for cognitive decline, and the outcomes of intervention, with a particular emphasis on blood pressure and an overall aim of providing clear guidelines for the protection of brain health across the life-course.

Competitive advantage

- International networks and collaboration with global opinion leaders
- Local and community links and real-world translation to practice

Impact

- Research outcomes changing global clinical practice guidelines for both the treatment of hypertension and for dementia risk reduction

Successful outcomes

- Worked with health advocacy groups to translate research findings for the community

Capabilities and facilities

- Evidence synthesis of global data sources including cohorts and clinical trials
